- At-Sea Sturgeon Monitoring
- Water Quality & Turbidity Monitoring
- At-Sea Fisheries Sampling
- Dredge Disposal Monitoring - [Dredge Material Inspector (DMI)]
- Endangered Species Educational Programs

REMSA Coastal Marine Services division has provided environmental services for marine dredging projects for over a decade. We began in 1999, originally as a service to commercial dredging companies, where we provided marine endangered species observers (MESO) in support of U.S. Army Corps of Engineers regulations for various dredging projects.

REMSA Inc., having been established in 1986, has a solid background and is well-respected in the industry. In addition to the MESO program, REMSA Inc. encompasses other business divisions: government contract staffing, management consulting services, project management, and GIS capabilities.

This division has rapidly evolved and expanded to include a much broader range of services to the marine construction industry. Our clients now include federal, state and local governments and port authorities, as well as private commercial construction and non-profit organizations.

While providing environmental services, we also balance your governmental regulatory and business needs.
